

# What happens if the irradiance changes during an I-V curve measurement?

How, if, the real life situation is such that the irradiance changes during an I-V curve measurement, it is possible that the I-V curve will be affected. The PV module temperature will also be affected by the change in irradiance. If the irradiance is low, the temperature will be low. If the irradiance is high, the temperature will be high. If the irradiance changes during an I-V curve measurement, the shape of the I-V curve will be affected.
